

## COVID Regulations

This document presents the Italian current regulations about COVID and the rules that have been followed during the event. In accordance with these rules, the organising committee has decided that all participants in the event, regardless of their country of origin, must fill out a Health Declaration, that will be sent to the confirmed participant, and also must be able to present a valid EUROPEAN DIGITAL COVID CERTIFICATE (also known as the “Green Certificate”) that has proof of full vaccination (completed at least 10 days before traveling) OR a one that has proof of recovery from COVID-19 in the last 180 days. Any COVID-19 vaccine is accepted.

This has been put in place in order to allow all the participants to take part in all the activities performed during the event, which will be done in accordance with the COVID-19 regulations.

If the participant has proof of full vaccination but does not have a European Digital COVID Certificate (non-European countries), please contact the organising committee at [napoli@euroavia.eu](mailto:napoli@euroavia.eu).

During the event, if any of the participants contract COVID-19, the organising committee will help him/her find proper accommodation and will cover its costs during the event period. However, AS Napoli will not cover the cost of accommodation outside of the event dates. During the isolation period, the participant will not be able to attend any of the event activities.

On the following page, we present the general measures in force in Italy until 30 September 2022. Though the event will be in the first week of October, we want to share the current situation in Italy and we will update the confirmed participants with the future changes in the Italian regulations.

For more information, you can contact the organising committee at [napoli@euroavia.eu](mailto:napoli@euroavia.eu).

### General measures

From 1 June 2022, the Green Pass (or equivalent certification) is no longer required for entry or return to Italy.

In Italy, until 30 September 2022, some containment measures against COVID-19 remain in force, such as the obligation to wear respiratory protection devices in certain contexts.

### MEASURES IN FORCE UNTIL 30 SEPTEMBER 2022

In Italy, there is no longer the obligation to show the "Green Pass" to access transport, restaurant or hotel services, or to access other businesses.

Until 30 September 2022, it is mandatory to wear FFP2 type respiratory protective devices on public means of transport (trains, ships, ferries, buses, airplanes, and other means of public transport), in social and health facilities, and in social welfare and in health facilities.

It is however recommended to wear respiratory protection devices in all public indoor places or places open to the public.

The following are not obliged to wear a respiratory protective device: a) children under the age of six; b) people with pathologies or disabilities incompatible with the use of the mask, as well as people who must communicate with a person with disabilities in order not to be able to use the device; c) subjects who are carrying out sporting activities.

The removal of restrictions on travel to/from Italy does not exclude that some may still impose on the entry of travelers from abroad.

It should be remembered that health care caused by COVID-19 in the world has not ended and, in particular, if you are undergoing a molecular or antigenic test for return from Italy, please note that travelers must take into consideration the possibility that the test gives a positive result. In this case, it is not possible to travel by commercial means and you are subject to the quarantine and containment procedures required.

According to local legislation, these procedures also involve the so-called "contacts" with the positive subject, who are also subjected to quarantine/isolation by the authorities and who are not allowed to move. It is therefore recommended to be careful in every aspect of the trip, also contemplating the possibility of having to spend an additional period abroad, as well as having health care that also covers the risks associated with COVID-19.
